

System Engineer

Full-time/part-time in Berlin (Germany)
and Frankfurt (Main) (Germany)

You want to work in a creative and dynamic team? You are looking for a future-proof job with the possibility of professional development? You are willing to work in new and unknown thematic areas? Then NEXTRAIL GmbH is the right employer for you!

Your Qualifications

- University degree or years of experience in the specified responsibilities
- Interest in the active design of present and future railway systems
- Experience in ERTMS and/or control command and signaling technology projects is preferable
- Experience in CENELEC standards, TSI, specifications is preferable

Your Tasks

- Specification and management of requirements for railway systems (e.g. electrical interlocking systems, ETCS, CBTC, control command and operating systems)
- Analysis and design of system architectures and system interfaces
- Technical support of ERTMS on-board and track-side equipment projects
- Support of acceptance, system and integration tests in the area of ERTMS

NEXTRAIL GmbH

NEXTRAIL offers overall system consultancy and technical support for railway operators and suppliers worldwide. As part of the quattron group NEXTRAIL complements the consultancy expertise for management, project controlling, IT and politics by operational and technical know-how.

We are focusing on:

- Conception, creation of specification, guidelines and tendering
- Safety analyses
- Testing, validation and system integration
- Data Management
